

Abbreviations	V
Foreword	VII

I. BASIC KNOWLEDGE

1 Definitions – classifications	3
Chronic venous disorders – Definitions	3
Chronic venous disorders and chronic venous disease	3
Venous insufficiency	3
Post-thrombotic syndrome	4
Varicose veins	4
Telangiectasias	5
Trophic changes	5
Leg ulcer	5
New CEAP definitions (2004)	5
Classifications of CVD	6
Widmer Classification	7
CEAP classification	7
Superficial Thrombophlebitis (STP) – Definition	11
Deep Vein Thrombosis (DVT) – Definition	12
2 Anatomy and pathology of the limb veins	15
Anatomy of the limb veins	15
Structure of the venous wall	15
Valve structure	15
Descriptive anatomy	16
Pathological anatomy	32
Telangiectasias	33
Varicose veins	33
Perforating veins	38
Primary deep valvular insufficiency (PDVI)	40
Deep vein compression	40
Free edge of the leaflets' valve sinus	40
Post-thrombotic syndrome	43
Thoraco-brachial outlet syndrome	43
Superior vena cava (SVC) syndrome	43
Venous aneurysms	44
Congenital venous malformations	44
Vein tumours	46
Sequelae of limb vein trauma	46
Venous lesions in the pelvic syndrome	47
Microangiopathy of chronic venous insufficiency (CMI)	47

3 Venous physiology	49
Venous physiology of the lower limb	49
Veins	49
Blood pressure and velocity in the venous and capillary compartment	51
Venous return	54
Others mechanisms	56
Environmental factors	58
Venous physiology of the upper limb	58
4 Pathophysiology of chronic venous disease	61
Venous pathophysiology of the lower limb	61
Pathophysiological mechanisms	61
Consequences	70
Aggravating factors	74
Consequences of chronic LL venous disease	79
Venous pathophysiology of the upper limb	79
Pathophysiology of telangiectasias	79
Wall lesions	80
Arteriovenous anastomoses	80
Hormones	80
5 Epidemiology and costs	83
Prevalence and incidence of venous disorders	83
Venous symptoms in the absence of clinical signs (C_{0S}) or anatomopathophysiological abnormalities (A_N and P_N) of CVD	83
C_1 , Telangiectasias and reticular varicose veins	83
C_2 , Varicose veins	84
C_3 , Oedema	85
C_4 , Skin changes of venous origin (pigmentation, eczema, lipodermatosclerosis)	85
$C_{5,6}$, Healed ulcer – unhealed ulcer	85
Post-thrombotic syndrome	86
Risk factors for telangiectasias, varicose veins, CVI, ulcer and the post-thrombotic syndrome	87
Risk factors for telangiectasias, varicose veins and CVI	87
Risk factors for the post-thrombotic syndrome	90
Cost of venous disorders	90
Post-thrombotic syndrome	91
Venous leg ulcer	91
Conclusions	91

II. CHRONIC VENOUS DISEASE

6 Symptoms	97
Symptoms	97
Impression of Swelling	98
Heavy Legs	98
Pruritus	98
Pain	98
Night Cramps	100
Restless Legs	100

Evaluation and quantification of the symptoms	101
Evaluation and quantification of the symptoms	102
Evaluation of disability	102
7 Signs	105
Telangiectasias	105
Definition of telangiectasias (C ₁)	106
Significance of telangiectasias	106
Development of telangiectasias	106
Clinical presentation	107
Topography of telangiectasias	108
Venous drainage of the skin	109
Differential diagnosis of telangiectasias	111
Clinical course and recurrence	111
Reticular varicose veins (C₁)	111
Clinical appearance	111
Differential diagnosis of reticular varicose veins	112
Complications	112
Varicose veins (C₂)	112
Saphenous varicose veins (truncal varicose veins)	112
Collateral saphenous varicose veins (accessory truncal varicose veins)	113
Non saphenous varicose veins	114
Varicose veins and pregnancy	114
Differential diagnosis of varicose veins	114
Complications	116
Oedema (C₂)	117
Causes of oedema	117
Venous oedema	117
Traveller's oedema	118
Lipoedema and lymphoedema	118
Trophic changes (C₄)	118
Pigmentation ("dermite ocre", purpuric and pigmented angiodermitis of Favre and Chaix)	119
Eczema	120
Lipodermatosclerosis	124
<i>Atrophie blanche</i>	127
Calcification (cutaneous calcinosis)	128
Healed venous ulcer (C₂)	129
Active ulcer (C₂)	130
Definitions	130
Epidemiology	130
Diagnosis	131
Differential diagnosis	131
Ulcers in Practice – clinical aspects	132
Complications	139
Progression	142
Venous signs not considered in the CEAP	143
Corona phlebectatica	143
Congenital venous malformations	144
"Deceptive" signs or signs "associated" with CVD	144
Erythema	144
Purpura	145
Ecchymosis and haematoma	147
Infections	147

Livedo	149
Lipoedema	150
Lymphatic disorders of CVD	152
Lymphoedema	152
Other cutaneous disorders associated with CVD	155
Relationship between drug injection and CVD	157
Cutaneous complications occurring during CVD and its treatment	157
Complications of local treatments	157
Complications of systemic treatments	158
Rare complications following surgery	159
Particular complications following sclerotherapy	161
3 Clinical forms	167
Primary varicose veins	167
Uncomplicated varicose veins	167
Incompetence of perforating veins	171
Particular clinical appearances	172
Particular anatomico-clinical forms of varicose veins and telangiectasias	172
Secondary varicose veins	180
Superficial venous insufficiency in the context of a post-thrombotic syndrome	180
Ehlers-Danlos syndrome	182
4 Particular venous disorders	185
Venous aneurysms	185
Background	185
Definition, pathology, pathophysiology	185
Clinical presentation and complementary investigations	185
Venous tumours	186
Background	186
Clinical presentation and complementary investigations	186
Sequelae of injury	187
Compression of deep veins in the legs	187
Chronic obstruction and compression of veins in the arms	189
Axillary-subclavian venous obstructive syndrome	189
Superior vena cava syndrome	190
Pelvic congestion syndrome	190
Symptoms	190
Clinical presentation	190
Diagnosis	190
Congenital venous malformations	191
Klippel-Trenaunay syndrome	191
Parkes-Weber syndrome	192
Differential diagnosis of venous malformations	192
Approach — Patient association	193
Agnesis, hypoplasia and valvular dysplasia	193
Valvular agnesis	193
Hypoplasia and valvular dysplasia	193
Differential diagnosis	194
Clinical repercussions	194
Arteriovenous fistulae	194
Symptoms	194
Clinical presentation	194
Diagnosis	195

10 Quality of life and CVD	197
Complaints voiced	197
Evaluation questionnaires	198
Results of a few studies	198
Conclusions	199

III INVESTIGATIONS

11 History and clinical examination	203
Reason for the consultation	203
Clinical history	203
Symptoms	204
Past history	205
Risk factors	205
Further clinical history	205
Prognosis	206
Patient examination	206
Chronic venous disease	206
Acute venous disease	211
Upper limbs	211
Phlebological tests	211
Tap sign (Schwartz's test, wave test)	212
Cough test	212
Trendelenburg test	212
Perthes test	215
Other tests	216
Validation of the clinical examination	218
Chronic venous disease	218
Acute venous disease	218
12 Ultrasonography	221
Doppler principle	222
Continuous wave doppler (CWD)	222
Duplex ultrasound (DU)	223
B mode ultrasound	223
Pulsed Doppler	223
Colour mode	223
Doppler energy or power	224
B-flow	225
3D	225
20 MHz probe	225
Contrast media	226
Ultrasound-guided techniques	226
Other ultrasound techniques	226
Technique	226
Investigation	226
Choice of probe and machine setting	230
Patient preparation and complications	231
DU or CWD?	231
Conclusion	235

13 Vascular investigations in venous disease excluding ultrasound techniques	241
General details	241
Non-invasive methods	241
Plethysmography	241
Static volumetry	245
Dynamic volumetry	245
Thermography	246
Measurement of transcutaneous oxygen pressure (TcPO ₂)	246
Laser Doppler	246
Capillaroscopy	247
Measurement of the systolic index (SI)	247
Invasive methods	248
Venous pressures	248
Phlebography	250
Other radiological techniques	254
Skin biopsy	257
Measurement of interstitial pressure	257
Endovenous ultrasound	257
14 Choice of investigations in chronic limb venous disease	259
Venous symptoms of the LL without visible or palpable sign of venous disease (C_{0s})	259
LL pain, LL venous pain, with no visible or palpable sign of venous disease	259
Other LL venous symptoms without visible or palpable sign of venous disease	260
C₁ – Presence of telangiectasias or reticular varicose veins	261
Telangiectasias	261
Reticular varicose veins	262
Varicose veins (C₂)	262
Saphenous varicose veins	262
Recurrence of varicose veins	263
Non-saphenous varicose veins	263
Venous malformations or varicose veins in the context of a congenital venous malformation	264
Secondary varicose veins	264
Oedema (C₃)	264
Trophic changes (C₄)	264
Active venous ulcer (C₅)	265
Post-thrombotic syndrome (PTS)	265
Primary deep valvular insufficiency	265
Venous claudication	265
Other situations	266
Venous disease of the upper limb	266

IV PREVENTION AND TREATMENT

15 Lifestyle, physiotherapy, prevention	269
Lifestyle	269
Background	269
Principles and objectives of treatment	269
Principles and methods	269

Sports and spare time	274
Background	274
Principles and objectives of sports training	274
Principles and methods	274
Particular aspects	275
Physiotherapy	276
Background	276
Principles and objectives of treatment	276
Examinations before treatment	277
Principles and methods	277
Crenotherapy – thermalism	278
Orthoses	279
Compression	280
Prevention	280
Chronic venous disease (CVD)	280
Pregnancy	280
Prevention of recurrence of ulcers	280
16 Compression therapy	285
Background	285
Active and passive compression	285
Compression	285
Support	286
Active or passive compression	286
Principles and objectives of treatment	286
Pressure	286
Pressure variations	287
Effects of compression	287
Objectives of compression	288
Pre-treatment examinations	288
Principle and methods	289
Materials	289
Elastic bandages	289
Compression stockings (medical stockings)	294
Indications	298
Contraindications	298
Results	300
Classes C _{0s} and C _{1s}	301
Treatment for varicose veins (C ₂)	301
Treatment for oedemas (C ₃)	302
Treatment for trophic changes (C ₄)	302
Prevention of recurrence of ulcers (C ₅)	302
Treatment of leg ulcers (C ₆)	303
Prevention of the progression of CVD	304
Prophylaxis for DVT	304
Treatment for superficial thrombophlebitis	304
Treatment for DVT	304
Prevention and treatment of post-thrombotic syndromes	304
Pregnancy	305
Prevention of oedemas and DVT during long-distance flights or long trips	305
Other indications	305
Compression and sports	305
Compression and quality of life	305
Economy of compression	305

Complications	306
Consequences of excessive pressure	306
Infectious complications	306
Allergies and irritation	306
Injury during application	306
Conclusions	306
17 Drug treatment of CVD	309
Venoactive drugs	309
Definition	309
Objectives, mode of action and evaluation	310
Classification and pharmacology of VAD	311
Indications for VAD, dosage, particular situations	320
Side effects	323
Results	323
Conclusion	327
Other medicinal products	327
Quinine sulphate	327
Fibrinolytic anabolic agents	327
Non-steroidal anti-inflammatory drugs	328
Diuretics	328
Platelet anti-aggregants	328
18 Sclerotherapy	335
Background	335
Principles and objectives of treatment	335
Pre-treatment exams	335
Principle and methods	336
Sclerosing agents	336
Techniques	338
Indications	343
Indications for the treatment of varicose veins and telangiectasias	343
Advantages of sclerotherapy	344
Other indications	344
Contraindications	344
Results	345
Telangiectasias	345
Reticular varicose veins	345
Accessory saphenous varicose veins	345
Varicose veins of the saphenous trunks	345
Perforating veins	346
Complications	346
Early complications	347
Late complications	348
Conclusions	351
Information for the patient	355
Sclerotherapy of small varicose veins and telangiectasias	355
Before treatment	355
After sclerotherapy	355
Risks and complications	355
Results	356
Information for the patient	356
Ultrasound-guided sclerotherapy for varicose veins	356

Advantages and drawbacks	356
Before treatment	356
After ultrasound-guided sclerotherapy	356
Risks and complications	357
19 Lasers, electro-coagulation, curetting and other treatments for telangiectasias	359
Sclerotherapy of telangiectasias	359
Lasers and flash lamps	359
Background	359
Definitions	360
Principles and objectives of the therapeutic method	361
Equipment and parameters	361
Patient examination and information	362
Indications	362
Contraindications and safety measures	362
Post-procedure care	363
Post-procedure complications	363
Results	363
Electrocoagulation	365
Background	365
Principles of the method	365
Methods	365
Contraindications	366
Complications	366
Results	366
Phlebectomy and curetting of telangiectasias	366
Background	366
Principles of the method	366
Methods	367
Follow-up and post-operative care	367
Complications	368
Results	368
Camouflage	369
Background	369
Principles of the method	369
Methods	369
Complications	370
Results	370
20 Surgical methods for the treatment of chronic venous disease	373
21 Surgical methods for the treatment of superficial venous insufficiency	375
Background	375
Principles and objectives of varicose vein surgery	375
In theory	375
In practice	375
Simplification of the aims of treatment	376
Principles of surgery and methods	377
Excision surgery	377
Endovenous ablation	382
So-called conservative haemodynamic techniques for saphenous trunks	384

Anaesthesia and hospitalisation	386
Post-operative care	387
Drug treatment	387
Post-operative elastic compression	387
Recovery	387
Complications of surgery	388
Peroperative complications	388
Postoperative complications	388
Tests before surgery for SVI	390
Results	390
Information for the patient	394
Surgery for varicose veins in the legs	394
Varicose veins	394
Symptoms and risks of progression	394
Therapeutic possibilities	394
Surgical procedures	395
Postoperative period	395
Possible complications	396
Declaration	397
22 Surgical methods for the treatment of perforating vein insufficiency (Pel)	399
Background	399
Objective of surgery	399
Principles and methods	400
Point surgery on perforating veins	400
Extensive surgery on perforating veins	400
Fasciotomy	402
Follow-up and postoperative care	402
Complications of surgery	402
Results	402
23 Surgical methods for the treatment of lower limb deep vein insufficiency	405
Background	405
Principles and objectives of surgery	405
Venous obstruction	405
Reflux	406
Principles and methods of surgery	406
Obstruction	406
Reflux	408
Specific complications	412
Preoperative investigations	412
Results	412
Obstruction	412
Reflux	415
24 Particular cases: surgical methods and results	419
Venous aneurysms	419
Aim of surgery	419
Preoperative investigations	419
Surgical methods	420
Results	421

Venous tumours	422
Principle of surgery	422
Surgical methods	422
Investigations	422
Results	422
Sequelae of venous trauma	425
Aim of surgery	425
Methods	425
Investigations	425
Results	425
Compression of deep veins in the lower limb	425
Aim of surgery	425
Investigations	425
Chronic obstruction and compression of veins in the arms	427
Axillary-subclavian vein	427
Superior vena cava	428
Pelvic congestion syndromes and pelvic varicose veins	429
Aim of surgery	429
Investigations	429
Classification of the surgical methods	429
Results of surgical treatment	431
Congenital venous malformations	431
Investigations	431
Methods	432
Results	432
25 Treatment of venous ulcers	435
Introduction	435
Aim of treatment	435
Treatment methods	436
Reduction of the venous hypertension and of its consequences	436
Local treatment of ulcers	439
Improvement in the effectiveness of the muscle pump	453
Adjuvant treatments	454
Treatment of ulcer complications	458
Monitoring the effectiveness of treatment	460
Ulcer measurement	460
Teleconsultation	462
Practical approach	462
Making the diagnosis	462
Venous ulcer	462
Refractory ulcer	464
Prevention of recurrences	465
Results of the treatment of venous ulcers	465
Healing	466
Prevention of recurrence	470
Specific features of the treatment of leg ulcers of other causes	471
Mixed ulcers	472
Necrotising angiodermatitis (Martorell's ulcer)	474
Arterial ulcers	474
Ulcers in <i>atrophie blanche</i>	474
Ulcers associated with connective tissue disease	475
Other ulcers	475

26 Therapeutic indications	481
Symptoms	481
Impression of swelling	482
Pruritus	482
Heavy legs	483
Pain	483
Night cramps	483
Restless legs	483
Symptomatology due to the female hormone cycle	484
Venous LL symptoms without visible or palpable signs of venous disorders	484
Venous changes and complications from CVD	484
Telangiectasias (C ₁)	484
Reticular varicose veins (C ₁)	485
Primary varicose veins (C ₂ , E _p)	485
Secondary varicose veins (C ₂ , E _s)	492
Perforating veins	492
Post-thrombotic syndrome	493
Signs due to or associated with CVD	494
Oedema	494
Lipoedema	494
Lymphoedema	494
Pigmentation	495
Stasis dermatitis and contact eczema	495
Lipodermatosclerosis	496
<i>Atrophie blanche</i>	496
Leg ulcer and ulcer scar	496
Other chronic venous disorders	496
Sequelae of injuries	496
Pelvic congestive syndrome	497
Congenital venous malformations	497
Primary deep venous insufficiency – Valvular agenesis	497

V. ACUTE VENOUS DISEASE

27 Definitions	501
Superficial thrombophlebitis (STP)	501
Deep vein thrombosis (DVT)	501
Pulmonary embolism (PE)	502
Post thrombotic syndrome (PTS)	502
28 Superficial thrombophlebitis	503
Epidemiology	503
Pathophysiology and aetiopathogenesis	504
Clinical presentation	504
Diagnosis	505
Superficial thrombophlebitis of varicose veins (varicophlebitis)	506
Superficial thrombophlebitis in a non-varicose vein	506
Specific presentations	507
Superficial thrombophlebitis and deep vein thrombosis	508

Treatment of superficial thrombophlebitis	508
Compression	509
Mobilisation	509
Anti-inflammatory agents	509
Thrombectomy	510
Anticoagulation	511
Platelet anti-aggregants	512
Surgery	512
Prevention of recurrences	513
STP in varicose veins	513
STP in a non-varicose vein	513
29 Deep vein thrombosis	517
Epidemiology, pathophysiology and natural history	517
Epidemiology	517
Pathophysiology and aetiopathogenesis	517
Natural history	519
Clinical symptoms and signs	519
Main symptoms and signs	519
Clinical examination	519
Clinical assessment scores	520
Differential diagnosis	521
Specific clinical forms of lower limb DVT	522
Phlegmasia alba dolens and coerulea dolens	522
Trousseau's syndrome	522
DVT and pregnancy	522
DVT from a venous spur	522
Traveller's DVT	523
Upper limb DVT	523
Pulmonary embolism	524
Paraclinical diagnostic investigations	524
Ascending phlebography	525
Ultrasound	526
D-dimer measurement	527
Diagnostics strategies	528
Pharmacology of anticoagulants	528
Heparins	528
Vitamin K antagonists	530
Specific factor Xa inhibitors	531
Specific thrombin inhibitors	531
Prevention of venous thromboembolic disease	532
Post-operative prevention	532
Prevention in non-surgical departments	533
Prevention of traveller's DVT	533
Medical treatment of deep vein thrombosis	534
Therapeutic measures	534
Ambulatory or hospital treatment?	537
Treatment of DVT in pregnancy and in the post-partum period	538
Partial inferior vena caval interruption	538
Antagonism of anticoagulant effect	539

30 Thrombolysis and the surgical treatment of acute venous disorders	543
Venous thrombectomy	543
Fibrinolysis	543
Acute venous trauma	545
Surgical techniques	545
Indications	545

VI. CONCLUSIONS

Conclusions	549
