

TABLE OF CONTENTS

Key words are in red bold

Introduction to meteorology P9

FIRST PART : GENERAL METEOROLOGY

Chapter 1 THE ATMOSPHERE P11

1.1 Definition

atmosphere

1.2 Composition

composition, dry air, ozone, humid air, water vapour, aerosols

1.3 Descriptive parameters of atmosphere

pressure, volume, temperature, humidity, wind

1.4 Observation and measurement

observation, measurement, satellite, geostationary satellites, polar orbiting satellites

1.5 Forecast

forecasting

1.6 Climatology

climatology

1.7 Atmospheric or meteorological scales

meteorological scale

Chapter 2 ENERGY AND TEMPERATURE P25

2.1 Definition and measurement

temperature, meteorological shelter

2.2 Exchanges of energy

radiation, visible range, infrared range, albedo, Solar radiation, Earth radiation, greenhouse effect, atmospheric transparency window, conduction, convection, latent heat, water cycle, turbulence, friction

2.3 Energy balance in Earth/atmosphere group

2.4 Horizontal variations of temperature

isotherms

2.5 Vertical variations of temperature : atmospheric stratification

temperature lapse rate, troposphere, stratosphere, tropopause, stratopause, inversion of temperature, ground temperature inversion

2.6 Day-to-day and seasonal variations of temperature

2.7 Aeronautical importance of air temperature

Chapter 3 ATMOPHERIC PRESSURE P41

3.1 Definition and measurement

pressure, hPa, mercury barometer, inches of mercury, aneroid barometer

3.2 Spatial variations of pressure

standard atmosphere, altimeter barometer, barometric lapse rate, isobar lines, anticyclone (high), ridge, wedge, depression (low), trough, centre of action, col, flat low, contour lines

3.3 Time variations of pressure

3.4 Origin of pressure variations

3.5 Aeronautical importance of pressure

Chapter 4 WATER IN THE ATMOSPHERE P57

4.1 The place and role of water in the atmosphere

water cycle

4.2 Changes of state of water and the water cycle

latent heat, water evaporation, melting of water, water sublimation, condensation

4.3 The real content of water in the atmosphere

vapour pressure, mixing ratio

4.4 Potential in water vapour, saturation and condensation

air parcel, saturation, saturation vapour pressure, saturation mixing ratio, condensation nuclei, freezing nuclei, supersaturation, condensation trails, supercooling

4.5 The mechanisms that lead to saturation and condensation

isobaric transformation, dew point temperature, dew, frost, radiation fog, advection fog,

adiabatic transformation, dry adiabatic lapse rate, condensation level, condensation temperature, saturated adiabatic lapse rate

4.6 Distance to saturation

relative humidity

4.7 Measuring humidity

4.8 Aeronautical applications

Chapter 5 CLOUDS AND PRECIPITATIONS P79

5.1 Notions of vertical atmospheric stability and instability

stability, instability, indifferent instability, conditional instability

5.2 Clouds

cloud, water droplets, ice crystals, supercooled droplets, cloud classification, cloud types, low-middle- high levels clouds, alto, cirro, strato, cumulo, cloud thickness, nimbo, nimbostratus, cumulonimbus, stratocumulus, cloud species, lenticularis, congestus, capillatus, calvus, fractus, virga, cloud coverage (nebulosity), cloud base (base height)

5.3 Precipitations

precipitation, Bergeron-Findeisen process, shower, rain, drizzle, snow, snow grains, ice pellets, snow pellets, soft hail, hail, intensity of a precipitation, weather radar

5.4 Photometeors

Chapter 6 ATMOSPHERIC MOVEMENT: THE WIND P107

6.1 Definition and representation of the wind

wind, wind direction, wind speed, isotachs, stream lines

6.2 General equation of atmospheric movement

pressure force, frictional force, Coriolis force

6.3 Horizontal component of the wind

geostrophic wind, pressure gradient, atmospheric boundary layer, free atmosphere, surface boundary layer, transition boundary layer, centrifugal force, gradient wind, cyclostrophic wind

6.4 The wind in three dimensions

ascent, horizontal convergence, subsidence, horizontal divergence

6.5 Wind measurement

wind vane, anemometer, gust of wind, squall

6.6 Aeronautical importance of the wind

Chapter 7 GENERAL ATMOSPHERIC CIRCULATION P131

7.1 The planetary framework

general circulation, normal, climatic situation, anomaly

7.2 Observing general atmospheric circulation

meteorological equator

7.3 Origin and dynamics of general atmospheric circulation

meridional circulation, inter-tropical convergence zone (ZCIT), doldrums, Hadley cells, katabatic winds, zonal circulations, polar easterlies, subtropical jet-stream, tropical easterly jet (TEJ), trade winds, monsoon, dynamic meteorology, weather types, dynamic centers of action, jet

7.4 Description of average pressure fields

pressure centers of thermal origin

Chapter 8 DISTURBANCES AROUND THE SYNOPTIC SCALE, AIR MASSES AND FRONTOLOGY P169

8.1 The synoptic framework

atmospheric disturbance

8.2 Disturbances in tropical regions

deep convection, tropical cyclogenesis, convective cloud clusters, convection lines, easterly waves, tropical depression, tropical storm, tropical cyclone, hurricane, typhoon, tropical cyclolysis, Harmattan, squall lines

8.3 Disturbances of temperate or extra-tropical regions

air mass, front, extra-tropical cyclogenesis, mature stage disturbance, occluded stage disturbance, cold air pool, warm front, cold front, occluded front, stationary front, secondary front, convergence line, weather types, blocking situations, flat low situation, polar jets, low level jets

8.4 Weather in polar regions

circumpolar eddy, polar anticyclone, katabatic wind

8.5 In order to make correct use of synoptic forecast

Chapter 9 LOCAL SCALE METEOROLOGICAL PHENOMENA P229

9.1 The local framework

aerology

9.2 Sub-synoptic eddies

polar lows, tornadoes, spouts

9.3 Mist, haze, fog and low clouds

mist, haze, fog, freezing fog, radiation fog, advection fog, evaporation fog, frontal fog, industrial fog, slope fog, mixing fog, stratus

9.4 Cumulonimbus clouds, lightning and thunderstorm

cumulonimbus, air-mass cumulonimbus, orographic cumulonimbus, frontal cumulonimbus, squall lines, electric discharges, lightning, thunder, thunderstorm, downbursts, macro-bursts, micro-bursts

9.5 Coastal regions phenomena

breeze, sea breeze, land breeze, sea breeze front

9.6 Orographic phenomena of mountain regions

valley breeze, up-valley breeze, down valley breeze, venturi effect, up-slope breeze, down-slope breeze, dry foehn, foehn, orographic stationary waves

9.7 Local winds

Mistral, Bora, Khamsin, Ghibli, Sirocco

9.8 Diurnal/nocturnal and seasonal evolutions

9.9 Aerology and climatology

9.10 Conclusion.: In order to make correct use of local forecast

Annex A CLIMATE OVERVIEW P279

wet equatorial climate, trade wind climate, highly seasonal tropical climate, coastal semi-arid tropical climate, continental arid tropical climate, wet sub-tropical climate, ocean climate, semi-arid continental climate, cold continental climate, mediterranean climate, continental sub-arctic climate, maritime sub-arctic climate, tundra climate, continental glacial climate

SECOND PART : AVIATION METEOROLOGY

Introduction to aviation meteorology

Chapter 10 PRELIMINARY REMARKS P287

significant, vulnerability, hazard, potential, poor or severe weather

Chapter 11 ATMOSPHERIC TURBIDITY P291

11.1 General considerations and specific definitions

rough assessment, evaluation, measurement, turbidity, luminous intensity, luminance, contrast, perception, visibility, prevailing visibility, runway visual range (RVR), vertical visibility, ceiling

11.2 The origins of atmospheric turbidity

rain, shower rain, drizzle, snow, hail, mist, fog, dust, sand, smoke, haze

11.3 Factors of vulnerability to atmospheric turbidity, direct and indirect effects

11.4 Problems of visibility and air safety : prevention and forecasting

Chapter 12 ICING AND OTHER TYPES OF CONTAMINATION P311

12.1 Definitions

contamination, icing, accretion, hoar frost, rime ice, clear ice, mixed ice, glazed frost, light-moderate-severe icing

12.2 The meteorological aspects of icing

ice potential

12.3 The aeronautical aspects of icing

12.4 The consequences of icing on an aircraft

12.5 Prevention, detection, suppression

de-icing, anti-icing

12.6 The other types of contamination in flight and on the ground

Chapter 13 ATMOSPHERIC TURBULENCE P339

13.1 Definition and reminders

atmospheric turbulence

13.2 Quantitative and qualitative classifications of atmospheric turbulence

potential atmospheric turbulence, frictional turbulence, air flow turbulence, orographic turbulence, mountain waves, cloud wake turbulence, clear air turbulence (CAT), frontal turbulence, convective turbulence

13.3 Factors of vulnerability to atmospheric turbulence : direct and indirect effects

13.4 Turbulence and air safety : analysis, detection, forecasting

13.5 Aircraft wake turbulence and weather conditions

Chapter 14 WINDSHEAR P363

14.1 Definitions

horizontal and vertical windshear, wind gradient

14.2 Origins of windshear in low troposphere

14.3 Factors of vulnerability to windshear : direct and indirect effects

14.4 Wind shear and air safety : analysis, detection, forecasting

wind profilers, terminal Doppler weather radar, Low Level Windshear Alert System

Chapter 15 CUMULONIMBUS CLOUDS - Thunderstorm and hail P383

15.1 Cumulonimbus: definitions and reminders

cumulonimbus, ISOL, OCNL, FRQ, EMBD

15.2 Thunderstorm

thunderstorm, lightning, thunder, multi-cell and super-cell thunderstorm, stormscope

15.3 Hail

hail, hailstone, weather radar, bright band

15.4 Help for Air Traffic Services

15.5 Hazards summary

Chapter 16 JETS P403

16.1 Reminders

jet, core, axis, level, jet streak, subtropical jet-stream, tropical easterly jet, polar jets

16.2 How to locate jet

Chapter 17 VOLCANIC ASH CLOUDS P417

17.1 Volcanic emissions and their aeronautical consequences

volcanic eruption, ash cloud

17.2 A watch system

Volcanic Ash Advisory Centers

Chapter 18 IONISING RADIATIONS – STRATOSPHERIC OZONE P423

18.1 Cosmic radiation and natural radioactivity

cosmic radiation

18.2 Stratospheric ozone

ozone

Annex B BAROMETRIC ALTIMETRY P427

B1 International Standard Atmosphere (ISA)

International Standard Atmosphere, altitude, geopotential altitude, geoid, pressure altitude, flight level

B2 Pressure altimeter

pressure altimeter, altimeter setting pressure

B3 Various settings and related uses

QFE, QNE, altimeter height, QNH, altimeter altitude

B4 Setting changes

transition altitude, transition level, transition layer

B5 Comparing standard atmosphere and true atmosphere

QFF

B6 Pressure altitude, density altitude, temperature altitude

pressure altitude, density altitude

ILLUSTRATIONS
